

**SOIL ASSOCIATIONS \***

- 1 Rock Land association: Rock outcrop and very shallow to shallow, strongly sloping to very steep gravelly sandy loams to very gravelly clay loams on mountains and buttes
- 2 Antho-Valencia association: Well-drained, nearly level to gently sloping sandy loams and gravelly sandy loams on alluvial fans
- 3 Laveen association: Well-drained, nearly level to gently sloping, calcareous loams and gravelly sandy loams on alluvial fans and terraces
- 4 Mohall-Contine association: Well-drained, nearly level loams, clay loams, and sandy clay loams on old alluvial fans
- 5 Gilman-Estrella-Avondale association: Well-drained, nearly level loams and clay loams on alluvial fans and flood plains
- 6 Alluvial land association: Excessively drained very gravelly sand alluvium in stream channels and on adjacent lowlands

\* The texture is that of the surface layer of the major soils.
